## C#

Run >

Result Size: 945 x 790

Get your own C# server

```
using System;
using System.Diagnostics;

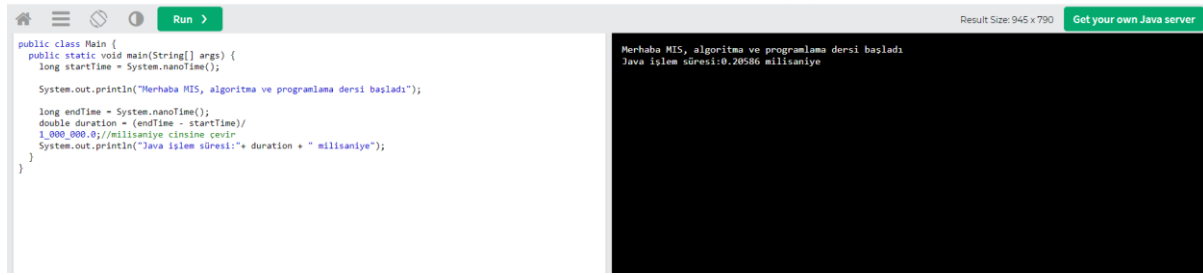

class Program
{
    static void Main()
    {
        Stopwatch stopwatch = new Stopwatch();
        stopwatch.Start();

        Console.WriteLine("Merhaba MIS, algoritma ve programlama dersi başladı");

        stopwatch.Stop();
        Console.WriteLine($"C# işlem süresi: {stopwatch.Elapsed.TotalSeconds} saniye");
    }
}
```

Merhaba MIS, algoritma ve programlama dersi başladı  
C# işlem süresi: 0.0077977 saniye

## Java

The screenshot shows a Java online compiler interface. On the left, there is a code editor with a Java program. The program defines a `Main` class with a `main` method that prints a message and calculates the execution time in milliseconds. The code is as follows:

```
public class Main {
    public static void main(String[] args) {
        long startTime = System.nanoTime();

        System.out.println("Merhaba MIS, algoritma ve programlama dersi başladı");

        long endTime = System.nanoTime();
        double duration = (endTime - startTime)/
            1_000_000.0;//milisaniye cinsine çevir
        System.out.println("Java işlem süresi:"+ duration + " milisaniye");
    }
}
```

On the right, the output window shows the execution result:

```
Merhaba MIS, algoritma ve programlama dersi başladı
Java işlem süresi:0.20586 milisaniye
```

At the top right, there is a button that says "Get your own Java server".

## Python

The screenshot shows a Python online compiler interface. On the left, there is a code editor with a Python program. The program imports the `time` module, prints a message, and calculates the execution time in seconds. The code is as follows:

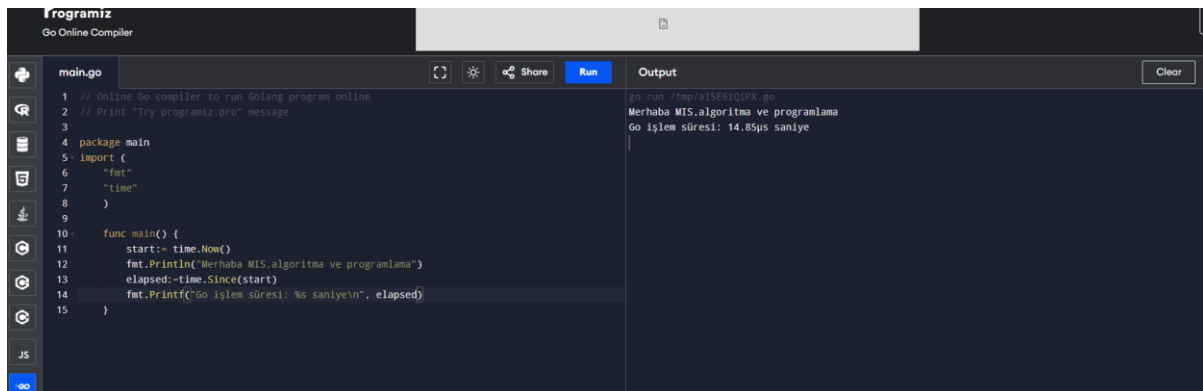

```
1 import time
2 start = time.time()
3 print("Merhaba MIS, algoritma ve programlama dersi başladı")
4 end=time.time()
5 print(f"Python işlem süresi: {end - start } saniye")
```

On the right, the output window shows the execution result:

```
Merhaba MIS, algoritma ve programlama dersi başladı
Python işlem süresi: 2.9802322387695312e-05 saniye

--- Code Execution Successful ---
```

## Go

The screenshot shows a Go online compiler interface. On the left, there is a code editor with a Go program. The program uses the `time` package to print a message and calculate the execution time in seconds. The code is as follows:

```
1 // Online Go compiler to run Golang program online
2 // Print "Try programiz.pro" message
3
4 package main
5 import (
6     "fmt"
7     "time"
8 )
9
10 func main() {
11     start:= time.Now()
12     fmt.Println("Merhaba MIS.algoritma ve programlama")
13     elapsed:=time.Since(start)
14     fmt.Printf("Go işlem süresi: %s saniye\n", elapsed)
15 }
```

On the right, the output window shows the execution result:

```
go run /tmp/AlSE610IPX.go
Merhaba MIS.algoritma ve programlama
Go işlem süresi: 14.85µs saniye
```

## Rust
